

The Brembo Product

The **electronic balancing** system allows to eliminate any possible difference in the weight split of vented discs, avoiding vibration risks.

The **perfectly uniform thickness** of the braking surfaces ensures top performance, maximum comfort and much higher durability of the components.

The **precise finish** of the braking surface, ground or fine turned depending on OE specifications, ensures improved pad-discs fit and better running-in.

The **extremely precise tolerance** guarantees correct run-out values and the elimination of several types of disc vibrations.
